

With five offices serving the Northwest, ALLWEST is the provider of choice for geotechnical and environmental engineering, and construction materials testing & inspection services. As an employee-owned company, we believe in a culture of growth that supports our clients, our communities, and our employees.

ALLWEST is seeking a **Geotechnical Engineer** based in our Spokane Valley, WA office.

Responsibilities:

Job responsibilities for this position will include field investigation and subsurface inspection of site conditions (including soil and rock classification and documentation), soils laboratory testing, geotechnical engineering analysis related to building foundations, slope stability, retaining wall design, and groundwater infiltration, report preparation, and field testing of soil subgrade and materials testing during project construction. This position will require a combination of field work and office work as dictated by project demand.

Requirements:

- Bachelor of Science degree in Geotechnical or Civil Engineering with experience in design and construction monitoring related to structure foundations and slope stability
- Current Professional Engineer (PE) registration
- 5-plus years' experience in geotechnical engineering
- Understanding of soil mechanics and construction practices are crucial for this position
- Effective communication skills, both verbal and written
- Project management experience is a plus
- Knowledge of engineering programs such as SLIDE, LPILE, and AutoCAD would also be beneficial

ALLWEST offers a balance between quality of life in a small, recreation-based community with a work environment that provides competitive salaries; paid time off and holidays; health and welfare benefits; 401k plan with company match; and a company ESOP (Employee Stock Ownership Plan).

Please send resumes and letter of interest to jobs@allwesttesting.com.

We are an Equal Opportunity Employer.
